DML 01
T2 weighted MRI image (horizontal section) showing demyelinating plaques as bright areas around the lateral ventricles.

DML 02
Gross coronal section showing plaques adjacent to lateral ventricles (note discolored areas at tips of ventricles)

DML 03
Microscopic image (stained with luxol fast blue to show myelin) illustrating multiple small areas of myelin loss (lack of blue staining) around vessels.
DML 04

Low power microscopic image. A lateral ventricle is located at top right. The absence of blue staining in tissue adjacent to the ventricle indicates a demyelinated plaque.
